CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD SAN FRANCISCO BAY REGION

ORDER NO. 97-101

REVISION TO SITE CLEANUP REQUIREMENTS AND RESCISSION OF ORDER NO. 92-052 FOR:

LOMBARDO DIAMOND CORE DRILLING COMPANY, INC., AND GILMORE SUPPLY COMPANY

FOR THE PROPERTY LOCATED AT: 585 ROBERT AVENUE, SANTA CLARA SANTA CLARA COUNTY

The California Regional Water Quality Control Board, San Francisco Bay Region (hereinafter called the Board) finds that:

SITE LOCATION

1. The Site consists of property at 585 Robert Avenue in Santa Clara, in an area used exclusively for industrial purposes. Lombardo Diamond Core Drilling Company, Inc. (hereinafter referred to as Lombardo) owns and has used and currently uses the two-acre (approximately) Site only for parking and storage of vehicles, heavy equipment and supplies, used in its concrete-cutting business. The only structure currently on the property is a warehouse in the eastern, reportedly unaffected, portion of the Site. A former industrial manufacturing facility on the Site was demolished in 1987.

SITE HISTORY

- 2. Lombardo Diamond Core Drilling Company, Inc. (Lombardo) purchased the property from Gilmore Supply Company in April of 1985 and began use of it at that time. Soil- and groundwater-pollution by metals had been identified before Lombardo purchased the property, and are suspected to have resulted from the operation of a galvanizing facility which existed previously at this location.
- 3. During the 1960s and 1970s the former property owner, Gilmore Supply Company, had leased the property to occupants who operated a galvanizing facility at the Site. It is believed that a galvanizing facility was in operation until approximately 1981, and that waste pickling and washing solutions may have been discharged on-site.

DISCHARGERS NAMED

4. Lombardo (Lombardo Diamond Core Drilling Company, Inc.), the current property owner, is named the Primary Responsible Party for Site remediation. Previous Site owners and occupants reportedly operated a galvanizing facility at this location, and most likely contributed to Site pollution. Lombardo did not operate a galvanizing facility or engage in any other manufacturing or industrial activity at this Site, but purchased the property after pollution had been identified.

The existing Order identified Lombardo, Metal Coatings Co. et al, and Gilmore Supply Co. as Dischargers, but named only Lombardo as responsible for Site cleanup because addresses of the other entities were not known. It was anticipated that the Order would be amended when the other companies had been located. Lombardo, through investigation, determined and reported to the Board in late 1992 the current addresses of aforementioned companies. Subsequently, Lombardo informed the Board that it wanted to proceed with Site remediation and did not (at that time) wish to pursue an action to name other Dischargers.

However, the Board herein names Gilmore Supply Company as Secondary Responsible Party and responsible for compliance only if the Board or Executive Officer finds that the other named Discharger (Lombardo) has failed to comply with the requirements of this Order.

REGULATORY STATUS

5. This Site is regulated by Site Cleanup Requirements under Board Order No. 92-052 (adopted May 20, 1992).

SITE HYDROGEOLOGY

6. The general direction of shallow ("A-Zone") groundwater movement reportedly is from south to north. Depth to groundwater originally was reported as about ten feet below the surface; at other times the depth has been reported as about 13 feet. An aquitard at 36-46 feet is interpreted to separate the uppermost "A" and underlying "B" Zones from each other. A deeper regional aquifer exists below a depth of about 200 feet, separated from the upper shallow aquifer(s) by fine-grained sediments. The lower aquifer is a major water-supply source.

REMEDIAL INVESTIGATION

- 7. Early Site work was of a limited extent. In 1981-1982 a preliminary Site investigation was conducted by a tenant while Gilmore Supply Company was the Site owner. Additional Site work apparently was accomplished by Gilmore Supply Company in 1983.
- 8. Soil and groundwater sampling revealed only metal pollutants; no VOCs were identified. The predominant metals were chromium, lead and zinc, with zinc having the highest concentrations. A total of 531 cubic yards of soil was excavated and removed in September 1983, after which additional soil testing was performed. At the conclusion of this work it was determined that metals pollution was detected in two environments: (a) soils with a "neutral" pH in the range of 6 to 8 units, and (b) soils with a significantly depressed pH (less than 6 units).
- 9. The early investigations showed concentrations of zinc and lead in shallow soils behind (north of) the former galvanizing facility (building), and beneath the building. Subsequent investigation indicated that zinc migrated deeper, and that lead appeared to attenuate within about five feet of the surface.

- Where the pH was less than 6, metal concentrations, particularly that zinc. were higher and extended deener: when it was found that where the pH was less than 6, metal concentrations, particularly that zinc, were higher and extended deeper; when it was found nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth from 2.000 nom concentrations of lead and zinc increased with denth denth from 2.000 nom concentrations of lead and zinc increased with denth denth from 2.000 nom concentrations of lead and zinc increased with denth zinc, were nigher and extended deeper; when it was found that the sum of the concentrations of lead and zinc increased with depth from 2,000 ppm (mg/kg) beneath the building wised to (mg/kg) to 8,000 ppm (mg/kg) of the investigation shifted to galvanizing operations, the focus of the investigation qroundwater. 10.
 - Low pH values were found in borings at depths of about 25 feet, and suggesting were suspected to extend at least to the 30-foot level suggesting LOW pH values were found in borings at depths of about 25 feet, and were suspected to extend at least to the 30-foot level, suggesting were suspected to extend at least to a gimilar denth that zinc pollution would also extend to a gimilar denth. were suspected to extend at least to the 30-100t level, suggested to extend at least to the similar depth. that zinc pollution would also extend to a similar depth. Following an effort to prepare a cleanup program and the removal of sall cubic vards of polluted soil in 1983. the Gilmore Supply Company groundwater. 11.

 - The Order adopted in 1992 required Lombardo to propose soil cleanup line order adopted in 1992 required hompardo to propose soil cleanup presum-levels and submit plans to remediate soil and groundwater, and groundwater, and groundwater and groundwater, and groundwater and ably by conventional methods of soil treatment/removal and groundpollution. 21. water "pump-and-treat".

- Following a 1991-1992 evaluation of all available information, FOLLOWING a 1991-1992 evaluation of all available information, and in Lombardo proposed a different approach for site remediation, and in 1992 requested Roard consurrance for an indenth investigation by LUMBBARDO OF the feasibility of applying institut neutralization as INTERIM REMEDIAL MEASURES Lombardo of the feasibility of applying in-situ neutralization as a groundwater remediation methodology LOHIDATOO OF the reasipility of applying in-situ neutralization as a groundwater remediation methodology, instead of the "pump-and-treat" procedures typically used in Santa Clara County. a groundwater remediation methodorogy, ribblead of the "treat" procedures typically used in Santa Clara County. 22.
 - agreed that Lombardo could investigate in-situ THE BOARD agreed that Lombardo could investigate in-situ neutralization and its applicability to this Site. Lombardo began the process which would lead to conducting a nilot test to the process which would lead to conducting a pilot test to demonstrate the feasibility of groundwater remediation by instituted the process which would lead to conducting a pliot test to demonstrate the feasibility of groundwater remediation by in-situ 23. neutralization.
 - Laboratory tests were conducted to determine a suitable neutralizing reagent, and several well-pairs were installed by Lombardo for field pilot-scale treatability testing. 24.
 - The bench-scale treatability testing that was conducted from January The pench-scale treatability testing that was conducted from January 25 to February 2, 1995, focused on the feasibility of using ferrous 25 to February 2, 1995, bicarbonate to reduce dissolved zing sulfate and sodium bicarbonate and sodium bicarbonate to reduce 25. sulfate
 - Bench-scale testing reportedly indicated that treating Sit groundwater with ferrous sulfate followed by sodium bicarbonate his groundwater with ferrous sulfate followed zing concentrations to about a capability of reducing dissolved zing concentrations to about concentrations in groundwater. groundwater with rerrous surface followed by sodium picarponate in about a capability of reducing dissolved zinc concentrations to about modifications against a single additional contents and additional contents are additional contents and additi a capability of reducing dissolved zinc concentrations to about mg/L, or less. These reagents facilitate zinc adsorption onto ir nreginitates. With both zinc and iron falling out of golution. mg/L, or less. These reagents racilitate zinc adsorption onto in precipitates, with both zinc and iron falling out of solution; to be graphed to be graphed over the long term precipitate is expected to be stable over the long term. 26.

- Pilot-scale testing of several well-pairs was initiated June 8, 1995 FILOT-scale testing of several well-pairs was indicate that and completed September 30, 1996. Reportedly, tests indicate of and completed September 30, 1996. The reducing concentrations of in-eith neutralization is effective in reducing concentrations. and completed September 30, 1996. Reportedly, tests indicate that in-situ neutralization is effective in reducing concentration of the discolved zing Tombardo recommends full scale implementation of the dissolved zinc. Lombardo recommends full-scale implementation of the dissolved zinc. Lombardo recommends full-scale implementation of the dissolved zinc. Lombardo recommends full-scale implementation of the dissolved zinc. procedure, as outlined in the Streamborn November 12, 1996 report. 27.
 - Remedial Action Plan. The Discharger's (Lombardo's) remedial action (draft gleanum) plan/proposal consists of full-scale groundwater kemedial Action Fian. The Discharger's (Lombardo's) remedial action (draft cleanup) plan/proposal consists of full-scale groundwater treatment by in-city neutralization canning areas of the property treatment by in-situ neutralization, capping areas of the property which have elevated concentrations of zinc in soil and monitoring treatment by in-situ neutralization, capping areas of the property which have elevated concentrations of zinc in soil, and monitoring that the concentration of zinc that the concentratio which have elevated concentrations of zinc in soil, and monitoring the groundwater. Lombardo anticipates that the concentration of zinc in groundwater will not exceed the Mot. (5 mg/t.) at the downgradient in groundwater will not exceed the MCL (5 mg/L) at the downgradient property boundary after treatment In groundwater will not exceed the MCL (5 mg/L) at the downgradient the property boundary after treatment. The Board believes that the has merit. The implementation of this proposal requires that the existing Board Order be modified. 28.
 - The Discharger (Lombardo) has submitted an interim remedial action The Discharger (Lombardo) has submitted an interim remedial action workplan for full-scale in-situ neutralization and Site capping, and a tentative (estimated) schedule existing Board Order be modified. a tentative (estimated) schedule. 29.
 - Lombardo plans to begin full-scale groundwater treatment in 1997 and LOHIDARGO PLANS to pegin rull-scale groundwater treatment in 1997 and continue this treatment into 1999, and to construct a groundwater treatment into 1999, and to construct a groundwater this treatment into the latter part of 1999. Groundwater zinc-contaminated soil during the latter part of 1999. Zinc-contaminated soil during the latter part of 1999. Groundwater monitoring will continue at least to the wear 2000 monitoring will continue at least to the year 2000. 30.
 - The Board accepts Lombardo's proposed remediation (draft cleanup) The Board accepts hompardo's proposed remediation (draft cleanup) to be implemented subject to plan as a viable alternative, and according to a schedule of Tasks prohibitions regited herein and according to a schedule of the prohibitions regited herein and according to the prohibition regited herein and according to the prohibition regited herein and according to the prohibition regited herein accor plan as a viable alternative, to be implemented subject to prohibitions recited herein, and according to a schedule of Tasks, and other requirements as described in the provisions of this order Prominitions recited nerein, and according to a schedule of Tasks, and according to the Provisions of this Order. 31.

- The Board adopted a revised Water Quality Control plan for the San The Board adopted a revised water Quality Control Plan for the San Francisco Bay Region (Basin Plan) on June 21, 1995. This updated and governing the Board's master water or ality Francisco Bay Region (Basin Plan) on June 21, 1995. This updated and consolidated plan represents the Board's master water quality consolidated plan represents the Board's master water quality by control planning document. The revised Basin Plan was approved by the grate Water Decourses Control Board and the Office of the grate Water Decourses control planning document. The revised Basin Plan was approved by the State Water Resources Control Board and the 13, 1995, and November 13, 1995, administrative Law on July 20, provisions is contained in 23 respectively. A summary of regulatory provisions BASIN PLAN Administrative Law on July 20, 1995, and November 13, 1995, and 1995, and November 13, 1995, and 1995 respectively. A summary of regulatory provisions is contained in 23 cCR 3912. The Basin Plan defines beneficial uses and water quality of the characteristic for waters of the characteristics for waters of the characteristics. 32. CCR 3912. The Basin Plan derines penericial uses and water quality objectives for waters of the State, including surface waters and groundwaters
 - The potential beneficial uses of the groundwater underlying an adjacent to the property include: groundwaters. 33.
 - Industrial process water supply a.
 - Industrial service supply b.

In this general area the deeper regional aquifer below a depth Municipal and domestic supply about 200 feet is a major water-supply source. c.

Board Resolution No. 88-160 allows discharges of extracted, treated groundwater from Site Cleanups to surface waters only if it has been Board Resolution No. 88-160 allows discharges of extracted, treated that has been groundwater from Site Cleanups to Surface waters only if it has been groundwater from Site Cleanups to surface waters on the sanitary demonstrated that neither reclamation nor discharge to the sanitary groundwater from Site cleanups to surface waters only if it has been demonstrated that neither reclamation nor discharge to the sanitary sewer is technically and economically feasible Lombardo's current demonstrated that neither reclamation nor discharge to the sanitary sewer is technically and economically feasible. Lombardo's current draft cleanup plan does not require a discharge of extracted treated OTHER BOARD POLICIES sewer is reconstrainty and economically reasible. Lombardo's current draft cleanup plan does not require a discharge of extracted treated groundwater. 34.

Board Resolution No. 89-39, "Sources of Drinking Water", defines of Drinking Water in a groundwater in the potential sources of drinking water to include all groundwater in the potential sources of drinking water to include all groundwater in the potential sources of drinking water to include all groundwater in the potential sources of drinking water to include all groundwater in the potential sources of drinking water to include all groundwater in the potential sources of drinking water." BASIS FOR 13304 ORDER

37. The Discharger has caused or permitted waste to be discharged or deposited where it is or probably will be discharged into waters of the State and creates or threatens to create a condition of pollution or nuisance.

COST RECOVERY

38. Pursuant to California Water Code Section 13304, the Discharger is hereby notified that the Board is entitled to, and may seek reimbursement for, all reasonable costs actually incurred by the Board to investigate unauthorized discharges of waste and to oversee cleanup of such waste, abatement of the effects thereof, or other remedial action, required by this Order.

CEQA

39. This action is an Order to enforce the laws and regulations administered by the Board. As such, this action is categorically exempt from the provisions of the California Environmental Quality Act (CEQA) pursuant to Section 15321 of the Resources Agency Guidelines.

NOTIFICATION

40. The Board has notified the Discharger and interested agencies and persons of its intent under California Water Code Section 13304 to prescribe Site Cleanup Requirements for the discharge and has provided them with the opportunity for a public hearing and an opportunity to submit their written views and recommendations.

PUBLIC HEARING

41. The Board, in a public meeting, heard and considered all comments pertaining to the discharge.

IT IS HEREBY ORDERED, pursuant to Section 13304 of the California Water Code, that the Discharger (or its agents, successors, or assigns) shall cleanup and abate the effects described in the above findings as follows:

A. PROHIBITIONS

- 1. The discharge of wastes or hazardous materials in a manner which will degrade water quality or adversely affect the beneficial uses of waters of the State is prohibited.
- 2. Further significant migration of pollutants through subsurface transport to waters of the State is prohibited.
- 3. Activities associated with the subsurface investigation and cleanup which will cause significant adverse migration of wastes or hazardous substances are prohibited.

analyses that can only reasonably be performed on-site (e.g. temperature).

- 8. **Document Distribution:** Copies of all correspondence, technical reports, and other documents pertaining to compliance with this Order shall be provided to the following agencies:
 - a. City of Santa Clara
 - b. County of Santa Clara, Health Department
 - c. Santa Clara Valley Water District

The Executive Officer shall receive one complete copy of all correspondence, reports, and documents pertaining to compliance with this Order, and may modify this distribution list as needed.

- 9. Reporting of Changed Owner or Operator: The Discharger shall file a technical report on any changes in Site occupancy or ownership associated with the property and facility described in this Order.
- 10. Reporting of Hazardous Substance Release: If any hazardous substance is discharged in or on any waters of the State, or discharged and deposited where it is, or probably will be discharged in or on any waters of the State, the Discharger shall report such discharge to the Regional Board by calling (510) 286-1255 during regular office hours (Monday through Friday, 8:00 to 5:00).

A written report shall be filed with the Board within five (5) working days. The report shall describe: the nature of the hazardous substance, estimated quantity involved, duration of incident, cause of release, estimated size of affected area, nature of effect, corrective actions taken or planned, schedule of corrective actions planned, and persons/agencies notified.

This reporting is in addition to reporting to the Office of Emergency Services required pursuant to the Health and Safety Code.

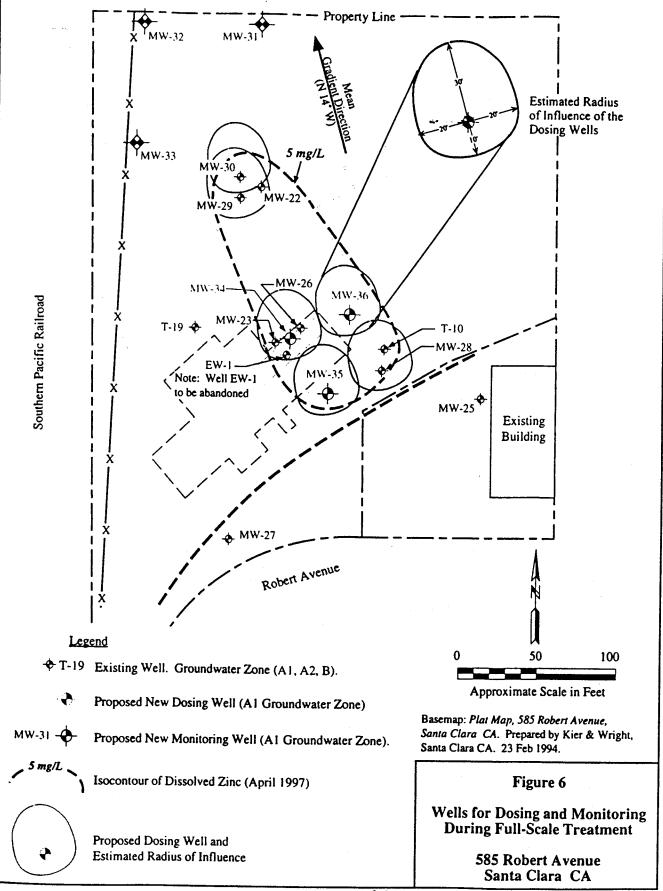

- 11. Rescission of Existing Order: This Order supersedes and rescinds Order No. 92-052.
- 12. **Periodic SCR Review:** The Board will review this Order periodically and may revise it when necessary. The Discharger may request revisions and upon review the Executive Officer may recommend that the Board revise these requirements.

I, Loretta K. Barsamian, Executive Officer, do hereby certify that the foregoing is a full, true and correct copy of an Order adopted by the California Regional Water Quality Control Board, San Francisco Bay Region, on August 20, 1997.

Loretta K. Barsamian Executive Officer FAILURE TO COMPLY WITH THE REQUIREMENTS OF THIS ORDER MAY SUBJECT YOU TO ENFORCEMENT ACTION, INCLUDING BUT NOT LIMITED TO IMPOSITION OF ADMINISTRATIVE CIVIL LIABILITY UNDER WATER CODE SECTION 13268 OR 13350, OR REFERRAL TO THE ATTORNEY GENERAL FOR INJUNCTIVE RELIEF OR CIVIL OR CRIMINAL LIABILITY.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD SAN FRANCISCO BAY REGION

SELF-MONITORING PROGRAM FOR:

LOMBARDO DIAMOND CORE DRILLING COMPANY, INC., AND GILMORE SUPPLY COMPANY

FOR THE PROPERTY LOCATED AT: 585 ROBERT AVENUE, SANTA CLARA SANTA CLARA COUNTY

- 1. Authority and purpose: The Board requests the technical reports required in this Self-Monitoring Program pursuant to Water Code Sections 13267 and 13304. This Self-Monitoring Program is intended to document compliance with Board Order No. 97-101 (site cleanup requirements).
- 2. **Monitoring:** The Discharger shall measure groundwater elevations and collect and analyze representative samples of groundwater according to the following schedule:

| Well # | Sampling Frequency | Analyses | Well # | Sampling Frequency | Analyses |
|--------|-----------------------|------------|--------|-----------------------|----------|
| MW-31 | Q | pH,metals | MW-22 | S | pH,metal |
| MW-32 | Q | pH,metals | MW-26 | S | pH,metal |
| MW-33 | Q | pH, metals | T-19 | S | pH,metal |
| MW-25 | A | pH, metals | MW-27 | A | pH,metal |

Key: Q=Quarterly (April 30, July 31, Oct. 30, Jan. 31);
S=Semi-annually (April 30, Oct. 30);
A=Annually (Oct. 30);
metals (dissolved)=zinc, lead, chromium.

The Discharger shall sample any new monitoring or extraction wells quarterly and analyze groundwater samples for the same constituents as shown in the above table. The Discharger may propose changes in the above table; any proposed changes are subject to Executive Officer approval.

3. Quarterly Monitoring Reports: The Discharger shall submit quarterly monitoring reports to the Board no later than 30 days following the end of the quarter (e.g. report for first quarter of the year due April 30). The first quarterly monitoring report shall be due on October 30, 1997. The report shall include:

- a. Transmittal Letter: The transmittal letter shall discuss any violations during the reporting period and actions taken or planned to correct the problem. The letter shall be signed by the Discharger's principal executive officer or his/her duly authorized representative, and shall include a statement by the official, under penalty of perjury, that the report is true and correct to the best of the official's knowledge.
- b. Groundwater Elevations: Groundwater elevation data shall be presented in tabular form, and a groundwater elevation map should be prepared for each monitored water-bearing zone. Historical groundwater elevations shall be included in the fourth quarterly report each year.
- c. Groundwater Analyses: Groundwater sampling data shall be presented in tabular form, and an isoconcentration map should be prepared for one or more key contaminants for each monitored water-bearing zone, as appropriate. The report shall indicate the analytical method used, detection limits obtained for each reported constituent, and a summary of QA/QC data. Historical groundwater sampling results shall be included in the quarterly report each year. The report shall describe any significant increases in contaminant concentrations since the last report, and any measures proposed to address the increases. Supporting data, such as lab data sheets, need not be included (however, see record keeping - below).
- d. Groundwater Extraction: If applicable, the report shall include groundwater extraction results in tabular form, for each extraction well and for the site as a whole, expressed in gallons per minute and total groundwater volume for the quarter. The report shall also include contaminant removal results, from groundwater extraction wells and from other remediation systems (e.g. soil vapor extraction), expressed in units of chemical mass per day and mass for the quarter. Historical mass removal results shall be included in the fourth quarterly report each year.
- e. Status Report: The quarterly report shall describe relevant work completed during the reporting period (e.g. site investigation, interim remedial measures) and work planned for the following quarter.
- 4. **Violation Reports:** If the Discharger violates requirements in Site Cleanup Requirements, then the Discharger shall notify the Board office by telephone as soon as practicable once the Discharger has knowledge of the violation. Board staff may, depending on violation severity, require the Discharger to submit a separate technical report on the violation within five working days of telephone notification.

- 5. Other Reports: The Discharger shall notify the Board in writing prior to any site activities, such as construction or underground tank removal, which have the potential to cause further migration of contaminants or which would provide new opportunities for site investigation.
- Record Keeping: The Discharger or his/her agent shall retain data generated for the above reports, including lab results and QA/QC data, for a minimum of six years after origination and shall make them available to the Board upon request.
- 7. **SMP Revisions:** Revisions to the Self-Monitoring Program may be ordered by the Executive Officer, either on his/her own initiative or at the request of the Discharger. Prior to making SMP revisions, the Executive Officer will consider the burden, including costs, of associated self-monitoring reports relative to the benefits to be obtained from these reports.
- I, Loretta K. Barsamian, Executive Officer, hereby certify that this Self-Monitoring Program was adopted by the Board on August 20, 1997.

Loretta K. Barsamian Executive Officer
